

Early Warning and Intervention

Access the right insights, in the right place, at just the right time to impact student success

Seamlessly Identify Students At-Risk

Drive Meaningful Interventions

Improve Graduation Rates and Student Retention

Hoonuit enables educators to identify students at-risk earlier and integrates intervention workflows to easily track the progress of each implementation.

We bring disparate data sources together and use predictive analytics and data modeling to provide cutting-edge insight into which students are at-risk.

We also support you in implementing and running scalable intervention programs. Teachers can identify the correct interventions for students, efficiently administer the specific support students need, and track whether the intervention is making a difference in student success.

TEACHER- AND STUDENT-CENTERED SOLUTION

Bringing together all of the necessary elements in one place

Improve Risk Identification

Promote Meaningful Interventions

Impact Student Outcomes

Why Hoonuit for Early Warning and Intervention?

Unique insights to identify students at-risk, implement interventions, and track program effectiveness.

Identification

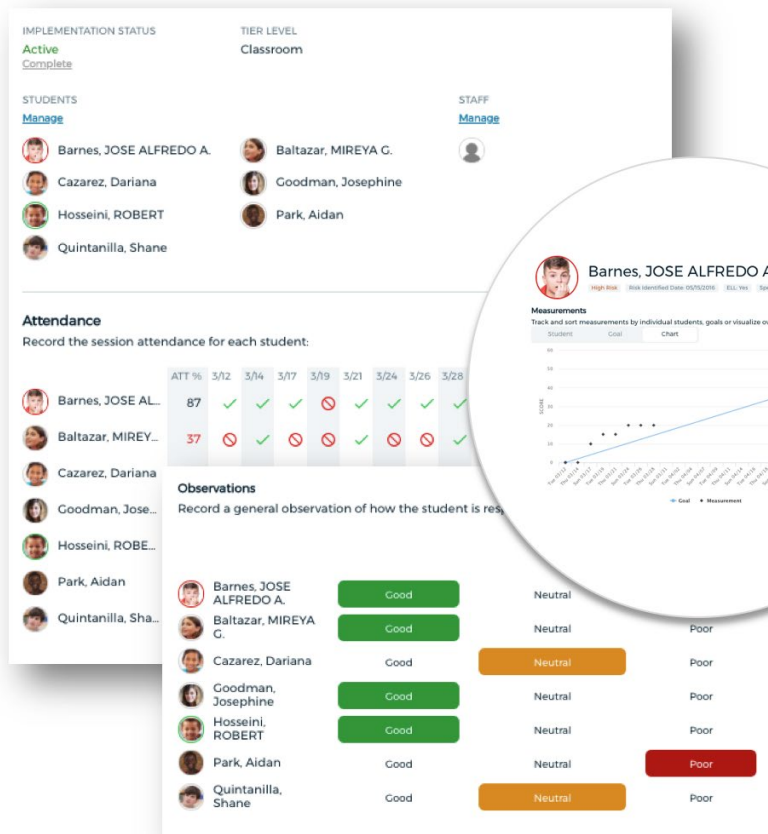

Use predictive analytics to identify students at-risk earlier, detect why they are at-risk, and get them back on track.

Intervention

Implement interventions with visualizations for faster decision making in a classroom workflow.

Program Effectiveness

Monitor school and district-wide intervention results.

Insight you need, when you need it.

"Santa Clara Unified School District has been able to identify their highest leverage indicators and has used them to assign credit deficient students to credit-recovery interventions. As a result, their graduation rate has increased 5.1% in the past 4 years."

— Marcy Lauck, Director of Data Governance
Santa Clara County Office of Education
